

Human Caused Climate Change? A Skeptical Look at the Narrative

Climate Related Websites & Sources

(eleventh PDF of 12)

Roger Golden Brown

Published June 21, 2023

Find all PDFs in this package & other Climate Related material on [their website page](#).

Other PDFs on various subjects, exposing the machinations behind the mainstream narrative about our world, can be found [here on my website](#).

Should anyone feel like supporting my continuing this work, a donation button is to be found [on my website](#) (left sidebar and on a page shown in the menu). Thank you.

Note: Please read the first PDF, *Introduction to Human Caused Climate Change? A Skeptical Look at the Narrative* first, where the intent and scope of this project are explained.

Note: Text that is indented both from the right and left (like this paragraph) is quoted from the noted source.

Contents

[Selected sites](#) - sites I'm familiar with, not in any particular order

[More Climate Oriented Websites](#)

[Related Documentaries, Videos](#)

Selected Sites

[Watts Up With That?](#)

From the website:

The world's most viewed site on global warming and climate change. Now that WUWT has become the most viewed (and arguably the most well-known) website in the world on climate related issues, I feel a sense of duty to keep people informed. I also feel a duty to make known what I see as the untold story of the climate debate from the climate skeptic side.

[Everything Climate](#) (a sub website from Watts Up With That?)

The article for each item in the four menu topics gives both a pro and con side to that particular climate statement. From the website:

EC is a website covering both sides of the climate debate – factually. EverythingClimate is devoted to cataloging, evaluating and publishing information concerning scientific theories of global warming. This includes related policy proposals and actions, legal and governmental developments and public and private initiatives.

[ClimateRealism](#)

The Climate focused website of the Heartland Institute. Lots of articles under several categories: Extreme Weather, Economics and Policy, Climate Change Impacts, Underlying Science.

[The Heartland Institute - Environment & Energy](#)

The Heartland Institute's Environment & Energy page.

[JoNova](#)

From the website:

Why the blog?

In 2008 Jo was dismayed that the good brand-name of science was being exploited and wrote [The Skeptics Handbook](#) pro bono. Some 220,000 copies of the Handbook were published worldwide. Her paper, [Climate Money](#), was the first to document the unprecedented rise of volunteer auditors and independent scientists and the massive one-sided way government funding worked to distort science: supporters of the man-made climate catastrophe had been paid 3,500 times as much as skeptics. She was among the first to spotlight the influential role of banks and financial houses who had a major stake in carbon trading. Banks want to save the world. Who knew?

[Climate Depot](#)

Lots of links to articles and videos. From the website:

Marc Morano Biography - Climate Depot publisher Marc Morano is the author of the 2021 book, *Green Fraud: Why the Green New Deal Is Even Worse than You Than You Think* and the author of the best-selling 2018 book, "The Politically Incorrect Guide to Climate Change." He is also the award-winning producer, writer and host of *Climate Hustle* — a film released in 2016 to hundreds of U.S. theatres — and *Climate Hustle 2* in 2020.

[A Walk On The Natural Side](#)

A Walk On The Natural Side

From the website:

Jim Steele: I am an ecologist. I received a Masters in Biology from San Francisco State University where I served as SFSU's Director of the Sierra Nevada Field Campus from 1984 to 2010. During that time, I was also the principal investigator for the U. S. Forest Service's Neotropical Migratory Bird monitoring in Riparian Habitats on the Tahoe National Forest and initiated the partnership for the successful Carman Valley Watershed Restoration project.

Below are 4 more links to pages on Jim Steele's website on particular subjects with lots of information. Separate links are offered because it's not obvious how to get there from the main page.

[Sea Level Rise Misinformation: Fear-Mongering By COP26, DOD, NPR & Mainstream Media](#)

[Fear Mongering Floods](#)

[Natural Cycles Of Polar Sea Ice: The Arctic Iris Effect](#)

[Search Results For Drought](#)

[Landscapes and Cycles: An Environmentalist's Journey to Climate Skepticism](#)

Another Jim Steele website with lots of links to articles on a huge array of climate issues. From the website:

Jim Steele's *Landscapes and Cycles: An Environmentalist's Journey to Climate Skepticism* examines how the inflated catastrophic claims of climate change has been misleading conservation efforts, and misdirecting critical funding and thwarting attempts to build a more resilient environment.

[Climate Etc.](#)

From the website:

Climate Etc.

Climate Etc. is hosted by Judith Curry.

Climate Etc. provides a forum for climate researchers, academics and technical experts from other fields, citizen scientists, and the interested public to engage in a discussion on topics related to climate science and the science-policy interface.

I am President (co-owner) of Climate Forecast Applications Network (CFAN). Previously, I was Professor and Chair of the School of Earth and Atmospheric Sciences at the Georgia Institute of Technology.

[Not A Lot Of People Know That](#)

From the website:

Bringing some sanity to the Climate Change debate.

"We do not believe any group of men adequate enough or wise enough to operate without scrutiny or without criticism. We know that the only way to avoid error is to detect it, that the only way to detect it is to be free to inquire. We know that in secrecy error undetected will flourish and subvert".

– J Robert Oppenheimer.

[Real Climate Science - Tony Heller](#)

This website has an extensive menu covering every aspect of the climate debate. Click on any one to get a long page of related information. Used as evidence are lots of newspaper articles and graphs and such from the past.

From the website:

"Science is the belief in the ignorance of the experts." — Richard Feynman

[Climate Audit](#)

Steve McIntyre has done a lot of digging into claims of the climate apocalypse purveyors; notably challenging the famous hockey stick graph that was immediately accepted by the UN's IPCC without review and presented as evidence. Check out the extensive drop down menu under the "Categories" heading. Also his "Blogroll" has links to many people's work regarding climate.

[CO2 Coalition](#)

From their About page:

In carrying out our mission, we seek to strengthen the understanding of the role of science and the scientific process in addressing complex public policy issues like climate change. Science produces empirical, measurable, objective facts and provides a means for testing hypotheses that can be replicated and potentially disproven. Approaches to policy that do not adhere to the scientific process risk grave damage to the economy and to science.

[Climate4you](#)

Find here an incredible amount of graphs, charts, and historical information and data. Many categories in the menu have long pages of explanations of information. Check the 3rd menu item, Global Temperatures, for lots of graphs of the bigger picture.

[CO2 Science](#)

From the website:

Mission Statement:

The Center for the Study of Carbon Dioxide and Global Change was created to disseminate factual reports and sound commentary on new developments in the world-wide scientific quest to determine the climatic and biological consequences of the ongoing rise in the air's CO₂ content. It meets this objective through weekly online publication of its CO₂ Science magazine, which contains editorials on topics of current concern and mini-reviews of recently published peer-reviewed scientific journal articles, books, and other educational materials. In this endeavor, the Center attempts to separate reality from rhetoric in the emotionally-charged debate that swirls around the subject of carbon dioxide and global change.

[Net Zero Watch](#)

From the website:

Who We Are - Net Zero Watch is highlighting and discussing the serious implications of expensive and poorly considered climate change policies.

Net Zero Watch will scrutinise policies, establish what they really cost, determine who will have to pay, and explore affordable alternatives.

[SeaLevel.info](#)

From the website:

Your one-stop source for sea-level information, with interactive tools for linear and quadratic regression analysis, and graphing, of measured sea-level trends, at over 1200 locations.

[Links to James Corbett Climate Related Videos & Reports](#)

Articles, videos, and interviews on the Corbett Report website; all with show notes including links to sources used or referred to.

[Climate Change? Skeptical Sources + some Data and Dogma](#)

A PDF with links to over 80 PDFs, many of which are referenced in *Human Caused Climate Change? A Skeptical Look at the Narrative*, and many more that aren't. All available to read or download. (The reason I link to the page instead of the PDF directly is that using the link button on the website will always be the most recent update.)
