Preface

On September 18th, 2023 Jimmy Dore published his video interview of Robert Epstein, *How Google Shifted 6 Million Votes To Joe Biden!*. In the interview Epstein explains that he has developed a way to hold Google to account. He says he is doing to Google what they do to us, monitoring and surveilling them and capturing the content. He says he has been able to "preserve" their ephemeral activity, which usually disappears, now keeping it as a matter of record.

This PDF is links to sites and material that Epstein referenced in the interview with some excerpts, as well as some more related material.

Links to Information About and Related to Epstein's Work

- [How Google Shifted 6 MILLION Votes To Joe Biden with Dr Robert Epstein](#) - Jimmy Dore's video interview.
- [Help MeStop BigTech!](#) - Epstein's fund raising page. From the page, His outline of what he is doing including links to more info:

Google-and-the-Gang shifted at least 6 million votes in 2020 and even more in 2022. No law can stop them, but monitoring systems, like the ones I've been building since 2016, can. By the end of 2023, my team and I will have built a permanent, large-scale monitoring system in all 50 US states - the world's first nationwide Digital Shield. That system will protect our elections and our children from Big Tech manipulations for the foreseeable

future. Help me expand my cutting-edge research and monitoring projects. Scroll down for the latest updates, or click [here](#) to view a 15-minute video showing our 2020 election findings. To download my recent report, Google's Triple Threat: To Democracy, Our Children, and Our Minds, click [here](#). To read my latest essay, "How Google Stopped the Red Wave," click [here](#). To read a powerful new article about my work by renowned New York Post reporter Miranda Devine, click [here](#). It ends, "Only Epstein is standing in the way."

- [Large-Scale Monitoring of Big Tech Political Manipulations in the 2020 Election and 2021 Senate Runoffs, and Why Monitoring is Essential for Democracy](#) - a 15 minute video by Robert Epstein et al. that was linked to on the *Help Me Stop BigTech!* website and can be seen on my Quasar video channel.
- [Tech Watch - Pioneering Research to Protect Democracy and Online Safety](#) - Dedicated to making our digital world more safe and fair by providing a 24/7 monitoring system, transparent insights and innovative solutions. From the page:

For the past six years, we have been developing an entirely new system for building transparency on the internet. It is a 24/7 nationwide internet content monitoring system that could change everything. Imagine a world free from biased algorithms, where information is shared with the people without an agenda, and there is real-time accountability when companies stray from integrity.

Our Approach

At the Tech Watch Project, we are committed to holding Big Tech companies accountable to the public. Our unwavering approach involves innovations that make the work unique and possible to show what big tech is doing:

- Preserving Ephemeral Content

We diligently collect and archive vast amounts of ephemeral content from across the nation. By doing so, we ensure that crucial information is not lost and create a comprehensive record for thorough analysis and investigation.

- Real-Time Analysis

Leveraging our advanced technologies, we have the capability to analyze the preserved content in real time. This empowers us to swiftly identify and expose instances of bias, manipulation, and censorship as they unfold, bringing transparency to the forefront.

The Selfish Ledger

The video, The Selfish Ledger, was referenced by Robert Epstein in his Jimmy Dore interview. It is a 2016 in-house 9 minute video of Google's, not meant to be distributed. It is about the "ledger" created by the composite of all collected digital data related to a person, which conveniently enables them to be socially engineered.

The video was published on The Verge website and Robert Epstein has published the transcript. Links to both are below. From the transcript:

Initially, the notion of a goal-oriented ledger may be user driven. As an organization, Google would be responsible for offering suitable targets for a user's ledger. Whilst the notion of a "global good" is problematic, topics would likely focus on health or environmental impact to reflect Google's values as an organization.

Once the user selects a volition for their ledger, every interaction may be compared to a series of parallel options. If one of these options allows the ledger to move closer to its goal, it will be offered up to the user. Over time, by selecting these options, the user's behavior may be modified, and the ledger moves closer to its target.

Three PDFs by Robert Epstein

- [The Technological Elite Are Now in Control](#) - Robert Epstein, November 9, 2020. From the PDF:

I can't resist ending this section without a few bullet points:

- In 2015, Eric Schmidt, then head of Google, offered in writing to head up Clinton's tech campaign in her run for the presidency.
- In 2016, Alphabet, Google's parent company, was Hillary Clinton's largest donor. (Disclosure: I supported Clinton in this election. I am not a conservative.)
- That same year, Schmidt bankrolled a highly secretive company called The Groundwork, the sole purpose of which was to use high-level tech to make sure Clinton won in 2016. (Schmidt failed, of course. He got her the popular vote, but he was sloppy about controlling votes in the swing states.)

- Stephanie Hannon, Hillary Clinton's Chief Technology Officer, was a former Google executive. So was Megan Smith, President Obama's Chief Technology Officer.

- 96 percent of donations from Google employees go to Democrats.

- More than 90 percent of all donations from all Silicon Valley tech companies go to Democrats.

- "The Selfish Ledger," an 8-minute video that leaked from Google in May, 2018, explains how the company's algorithms can be used to reengineer humanity according to "company values." This video, which was never meant to be seen outside Google, is so startling that I transcribed it.

- "The Good Censor," a briefing that leaked from Google in October 2018, says Google must accept its role as "moderator in chief" of the world – deciding what content billions of people can and can not see. I wonder whether the rest of the world – the world outside Google – might want to weigh in on that.

- In September, 2018, a truly extraordinary video leaked from Google: It showed an hour-long all-hands meeting that took place at company headquarters just days after Trump's win in 2016. The company's distraught founders and top executives were on stage, and they made it clear that Google would not allow Trump to be reelected. As Ruth Porat, the company's Chief Financial Officer, put it, "Our values are strong. We will fight to protect them, and we will use the great strength and resources and reach we have to continue to advance really important values."

- [The search engine manipulation effect \(SEME\) and its possible impact on the outcomes of elections](#) - Robert Epstein and Ronald E. Robertson, October, 2014
- [Google's Triple Threat - To Democracy, our Children, and our Minds](#) - Robert Epstein, October 3, 2022
