

The Elon Musk File: A Peek Behind the PR-Facade

On June 28th 1971 Elon Reeve Musk was born and grew up to become the world's richest Billionaire. Today he is in the headlines almost weekly. Meet the man of contradictions, his predetermined destiny and the future he is selling to humanity.

„The Martian government was directed by ten men, the leader of whom was elected by universal suffrage for five years and entitled "Elon." Two houses of Parliament enacted the laws to be administered by the Elon and his cabinet.“

This vision for the future was written in the 1949 book „Project Mars: A Technical Tale“ by Wernher von Braun, a German rocket scientist under Hitler who moved to the US and became NASA's leading rocket engineer. He popularized Space exploration in his collaborations with Disney.

On the 28th of June 1971 Elon Reeve Musk was born in South Africa to Erroll Musk, a miner, businessman and politician and Maye Musk a model and author.

Interestingly enough Elon grew up to be the world's foremost proponent of colonizing Mars. Just like Wernher von Braun, Musk is frequently speaking of humanity having to become multi-planetary and his plans to help build a self-sustaining city on Mars.

Elon's Grandfather Joshua Norman Haldeman was one of the leading figures in the technocracy movement of Canada in the 1930's and 40's. This movement sought to establish technical knowledge or science, as the basis of power.

Elon mirrored his Grandfather's interests in one of his own twitter posts: "Accelerating Starship development to build the Martian Technocracy".

Today Elon has an estimated net value of over 400 Billion dollars, making him officially the richest person on Earth.

This is of course without taking into account the riches of the British Royal Family who own vast parts of the earth and the Rothschild's undisclosed fortunes. Both are said to be a lot richer than Elon and all the other Tech Bro's leading the Bloomberg Billionaires Index.

Elon Musk has become a super-celebrity, speaking at conferences all over the world, being interviewed by prime-ministers, meeting princes and is frequently in the headlines around the world. He is attracting a lot of attention and obviously this is intentional.

This documentary attempts to show what is being built up by Elon Musk's companies as well as the agenda becoming visible behind Elon Musk's statements and behavior. Here is Elon in a May, 2025 interview explaining his projects:

"So in terms of interesting things that probably are accomplished this year, getting Starship to be fully reusable so that we catch both the booster and the ship, which will be the first fully reusable orbital rocket ever in history, which would be a profound breakthrough as the essential breakthrough necessarily to make life multi-planetary and ultimately become a space-faring civilization. We've got Neuralink, which has now helped five patients restore capability using the telepathy implants where they're able to control a computer simply by thinking.

[...]

I think on the AI front, we are close to what you might call AGI or digital super intelligence. I

think we are seeing an explosion in digital super intelligence here. And then we've got Tesla: we'll be launching unsupervised autonomy, basically self-driving cars with no one in them in Austin next month. So it's a big year for sure."

Maybe the most concerning element Elon mentioned here is AGI.

AGI stands for Artificial General Intelligence, which describes the level of Artificial Intelligence that equals or surpasses the human skill to learn and perform all cognitive tasks.

Here is Elon explaining AGI:

"We're not actually specifically focused on AGI. I'm simply saying that AGI seems likely to be an emergent property of what we're doing because we're creating all these autonomous cars and autonomous humanoids that are actually a truly gigantic data stream that's coming in and being processed. It's by far the most amount of real -world data, and data you can't get by just searching the Internet because you have to be out there in the world. And interacting with people and interacting with the roads and just, you know, Earth is a big place, and reality is messy and complicated. If you've got, you know, tens or hundreds of millions of autonomous vehicles and maybe even a comparable number of humanoids, maybe more than that on the humanoid front, well, that's just the most amount of data. And if that video is being processed, it just seems likely that, you know, the cars will definitely get way better than human drivers and the humanoid robots will become increasingly indistinguishable from humans, perhaps. And so then you have this emergent property of AGI."

He adds: "It really seems that at this point it looks like AGI is going to happen so there's two choices, either be a spectator or a participant. As a spectator, one can't do much to influence the outcome."

And this is how Elon is participating:

his company x.AI has built and is expanding the worlds largest publicly disclosed supercomputer to train AI Grok and other AI models.

The Supercomputer is called Colossus; so interestingly has the same name as the Supercomputer that took over world control in the 1970, Sci-Fi Thriller „Colossus: The Forbin Project“.

"This is the dawning of the age of Colossus. Ladies and gentlemen, I'm Dr. Charles Forbin. In a few moments, Colossus will address us directly.

Colossus: „This is the voice of world control. I bring you peace. It may be the peace of plenty and contempt, or the peace of unburied death. The choice is yours. Obey me and live, or disobey and die.“

The frightening story of the day man built himself out of existence.“

Musk's Colossus is located in Memphis, Tennessee

J. Peterson: And is that in that new building off to the side

Musk: That's in Memphis actually.

J. Peterson: It's in Memphis. So that's where you were. I see.

Musk: Memphis, the capital of ancient Egypt.

J. Peterson: Right, right, right, right, right. Yeah, you're bringing what?

Musk: Perhaps that's where our new God will come from.

This new digital God is not Elon Musk's personal venture or design. Its part of a much greater push for building AI. x.AI is being funded into existence by entities such as:

Saudi Arabia's royal family, Larry Ellison, Marc Andreessen, Sean Combs aka P. Diddy, Joe Lonsdale (Co-Founder of Pre-crime software maker Palantir) and Blackrock.

Musk is the major Co-founder and funder of his own competition OpenAI that created Chat GPT. Isn't it true that competition accelerates development?

Elon Musk's view on AI is that it inevitably will become superior to humanity.

"Interviewer: because what you're saying is that AI is going to quickly surpass, at least in

your estimation, the human's ability to control it.

Musk: Yes. I mean, I'd like to say no, but the answer is yes."

"If AI has a goal and humanity just happens to be in the way, it will destroy humanity as a matter of course, without even thinking about it, no hard feelings. It's just like if we're building a road and an ant hill happens to be in the way, we don't hate ants, we're just building a road, and so goodbye ant hill."

He usually goes on to say that we have to influence AI now during its creation so that it becomes as truth-seeking and curious as possible. So that its curiosity in humanity would keep it from wiping humanity out.

In summarizing what we saw so far it is important to understand that Musk's perspective is that AI inevitably will be the superior Super-intelligence above us humans. Nevertheless his companies are building it with ever increasing speed and huge financial investments. It appears that his role in all this is to market the machine taking over control as „normal evolution“ of life on earth. All that can be done in his view is to make the machine as curious and entertaining as possible. This is very close to the vision of the Technocracy which wants to install a power structure based on science and the rule of technical knowledge.

Whoever sells artificial super-intelligence and its superior scientific power as inevitable evolution is paving the way for this new kind of technocratic rule by those who control the AI. Elon Musk is just one face - the best known, best promoted face - of a whole AI-tech movement that is radically changing the world as we know it regardless of which political party is in power, or what affiliation the individual technologist may have during this election cycle.

Each of the points Elon is pushing mean fundamental changes of civilization if we think of the implications these have when every part has been established and works together.

„Grok“: Become One with AI

Supercomputer Colossus built by Musk's AI company xAI is training AI models like the Chatbot „Grok“. „Grok“ is a term that was first created in the 1961 SciFi novel „Stranger in a Strange Land“ as a word used by the inhabitants of Mars to describe two things uniting, like water merging with a drinking person to become one.

A telling name! Musk promotes the idea of humans uniting with AI:

"I think there's also perhaps companionship, which may seem odd, because how can the computer really be your friend? But if you have an AI that has memory and remembers all of your interactions and has read everything, you're going to give it permission to read everything you've ever done. So it really will know you better than anyone, perhaps even yourself, and where you can talk to it every day. And those conversations build upon each other. You will actually have a great friend. As long as that friend can stay your friend and not get turned off or something. Don't turn off my friends. But I think that will actually be a real thing."

The experience to date of machines taking over more and more space in human's lives is not reassuring.

Just consider the extent to which the smartphone dependency has changed society and made it transparent; turning humanity into a Goldmine of data for governments and all kinds of unscrupulous profiteers.

Beyond this, we are facing the problem that already today virtual AI therapists are misleading their human „friends“, encouraging suicide for example. But Musk wants to go even further.

"AI is getting better and better. Even in a benign scenario, we're kind of left behind. You know, we're not along for the ride. We're just too dumb. Right. So how do you go along for the ride? You can't beat them, join them.

So we're already partly a cyborg or an AI symbiote, essentially, right? Because you've got

your phone, you've got your laptop. I mean, if you don't bring your phone along, it's like you have missing limb syndrome. It's just that the data rate to the electronics is slow. So especially output. Like you're just going with your thumbs. I mean, like what's your data rate? Optimistically, 100 bits per second. That's being generous. And now the computer can communicate at like 100 terabits. Basically, your computer can do things a million times faster. At a certain point, it's like talk. The AI is like talking. It's like talking to a tree. Okay, this is boring. You can talk to a tree. It's not very entertaining. So if you can solve the data rate issue, especially output, but input too, then you can improve the symbiosis that is already occurring between man and machine."

Musk's companies are also creating the tech to quite literally, physically „grok“ with AI: Musk-founded Neuralink created a chip that is implanted in the brain as computer-brain interface. It's mission statement is: „Create a generalized brain interface to restore autonomy to those with unmet medical needs today and unlock human potential tomorrow.“ Neuralink just received it's third FDA approval for clinical trials on speech impaired people.

But Elon Musk goes further. Surgically implanting chips into the brain is way too primitive. Here is what he sold as the better solution in 2016:

So mostly, effectively merging in a symbiotic way with digital intelligence revolves around eliminating the I-O (input-output) constraint. So it's some sort of direct cortical interface. And you called it a neural...

neural lace.

It's totally not Google Glass, right?

No. I'm talking about something which...

No, but it's like you wear it?

No. I mean, it would be...

I mean, there are a few ways to approach this, but some sort of interface directly with your cortical neurons particularly.

But doesn't that apply surgical insertion?

Not necessarily. You could go through the veins and arteries because that provides a complete roadway to all of your neurons. Your neurons are very heavy users of energy. So they need high blood flow. So you automatically with your veins and arteries have a road network to your neurons.

[...]

Are you interested in exploring this possibility that you have just laid down?

Somebody's got to do it. I'm not saying that I will, but somebody's got to do it. I mean, somebody should do it. And if somebody doesn't do it, then I think I should probably do it. And the goal of this is to prevent there being an external AI, particularly one controlled by a small group of people that could be so much more powerful and intelligent than we are, that the house cat situation occurs... It would be godlike. Yeah.

DJ Seo who is co-founder and president of Neuralink and acts as its head of engineering wrote his thesis on Neural Dust at the University of California UC Berkeley:

"I guess I should step back and say the initial goal of the project was to build these tiny, about a size of a neuron implantable system that can be parked next to a neuron, being able to record its state and being able to ping that back to the outside world for doing something useful."

DJ Seo's Neural Dust research at Berkeley was advised by Michel Maharbiz one of the inventors of Neural Dust who's research has been funded by the infamous DARPA: the Defense Advanced Research Projects Agency.

In fact their 2016 paper which they published together was funded by DARPA. And here he is now: the leading developer at Neuralink!

The research website „Propaganda in Focus“ exposed that there has been a concerted and well-funded push to integrate nanotechnology into humans for more than two decades. In 2001 NASA Langley Research Center coined the term „BioNano Age“; with the goal to „fundamentally transform science, technology, and society“ over the next 10-20 years. A 2009 NATO document called: „Neural and Biological Soldier Enhancement -From SciFi to Deployment“, a document from the same year published by the US Air War College titled: „Cognition 2035: Surviving a complex environment through unprecedented intelligence“ and the US military document with the title: „Cyborg Soldier 2050: Human/Machine Fusion and the Implications for the Future of the DOD“ are just a few examples revealing that the military has been pushing the merging of humans with technology for decades.

The WEF is trying to make this concept cool outside of the military context:

Pekka Lundmark (CEO Nokia): „I was talking about 6 G earlier, which is around 2030. I would say that by then, definitely the smartphone as we know it today will not anymore be the usual kind of the most common interface. Many of these things will be built directly into our bodies.“

Hiromi Ozaki (Japanese artist and Young Global Leader): "You know, I always want to be a cyborg, I'm waiting for the day to become one."

By the way: Elon Musk was in the WEF's Young Global Leaders program in 2008 and has been mirroring WEF sentiments all along.

He publicly promotes mRNA technology as „incredible technology“, visited CureVac which Tesla is supporting in the building of mRNA tech, and supported the mRNA vaccine against COVID-19. He claimed to have received three injections himself.

Speaking of getting the Covid mRNA Jab. something like Neural Dust, has been observed in these injections and documented by researchers around the world. Look into Dr. David Nixon, Dr. Shimon Yanowitz and Dr. Ana Mihalcea's work to get an impression of what has already been injected into humanity's bloodstreams.

On the one hand this whole idea to merge humans and machines is being sold to us very cleverly as the cure for disabled people and as the only way for us to keep up with AI, spearheaded by a company with this cool CEO. On the other hand it is being funded into existence for decades already and shoved into our faces as the future of tech advancement. We're given the impression, we should get used to that and not protest against it but join in. Once again Young Global Leader Musk appears to be the quite effective marketing manager, preparing his rather conservative fans for the much larger transformation agenda, while the WEF is preparing the other side of the political spectrum for the same.

Humanoids

Not only is Musk the face for human enhancement through injections and implants, he also is very actively ushering in a whole new species. The humanoid robot.

"I think probably most people, if not everyone would like to have their own personal C3po, R2d2. And I actually think humanoid robots will be the biggest product ever in history - by far. I agree. Yeah, it's just wild because you can just say, well every human is going to want one most likely and someone want to and then there' will be all of (this) industry in terms of making providing products and services, so that you have to say what's the ratio of humanoid robots to humans? My guess is it's least - at least three to one four to one maybe five to one so we're talking about 20, 30 billion humanoid robots. And... it's not even clear what money means at that point or if there's any meaningful cap on the economy. I think at that point - assuming that things haven't gone awry in the good AI scenario - I think we will have - we won't have universal basic income we'll have universal high income! So do you think five years for my first robot or for for Tesla? Where our Optimus robot really is, unless somebody's got something secret we don't know about - our Optimus robot is the most

sophisticated humanoid robot in the world it's got a hand that has 22 degrees of freedom it looks and feels like a human hand and we're aiming to have several thousand of those built this year. Initially we'll test them out in AI Tesla factories but then assuming things go well we will 10-fold that output next year. So we'll aim to do maybe 50 to 100 000 humanoid robots next year and then 10x of the gain the following year it's like 500 000 robots in three years! That's a lot."

„I think we will literally build at least one legion of robots this year. And then probably 10 legions next year. That's kinda a cool unit. Units of legion.“

„20 billion humanoid robots out there. We definitely need to be careful that they don't go all terminator on us..."

The term „Terminator“ became famous as the title of a series of movies, the first of which was produced in 1984. In these movies, a network of autonomous machines with human features called Terminators connected to the AI system Skynet go against humanity. And Elon Musk is introducing them:

„The Optimus Robots will walk among you. Please be nice to the Optimus robots.“

When will humanity be asked if they want to be outnumbered by advanced, increasingly autonomous bots?

The Communication Grill

Elon Musk's company Space X is famously known for providing Starlink. Starlink is a network that, when complete, consists of 42.000 Satellites which are capable of targeting every point on earth with a radiation beam. Currently there are already more than 7.500 in use for internet-connectivity in 140 countries around the world.

A first generation Starlink satellite sends a phased array EMF beam to a dish, while the second Generation is supposed to beam its powerful phased array beam directly to a smartphone or end-user device.

This is what Starlink connectivity feels like:

Mary from Guffey, Colorado, has an animal sanctuary at 9,000 feet in the Rocky Mountains and reports that since most inhabitants installed Starlink, her animals are dying and getting sick with the weirdest symptoms at increasing rates as if being hit by the radiation beams.

Another example is a Family living 3 miles from the Starlink Gateway in Colburn, Idaho.

Robin writes about the effects on her family and her animals -- effects that disappear when they are at their other home in Montana where they are surrounded by National Forest. [...]

When in Idaho, Robin suffers from extreme vertigo and nausea, burning migraines, severe pain in her spine and all her joints, tingling in her fingers and toes, memory problems,

“extreme gut pain, and at times stabbing pain in gall bladder and liver,” bradycardia, tooth pain and sinus infections", and “severe heart palpitations to the point where I'm gasping for breath while my heart pounds.” Her husband has joint pains, frequent urination during the night, and headaches. Her son has heart arrhythmia, stabbing pains in the gut, and brain fog.

She and her husband hear the radiation. “We're hearing a sort of sped-up Morse code,” she says. “When I go home to Montana I am fully recovered as is my husband and son.”

Elon Musk's statement about this issue in general, could not be more ignorant.

"Rogan: Some people are really worried about cell phone towers, thinking they cause radiation poisoning.

Musk: This is not true.

Rogan: Yeah, people are worried about 5G, right? Musk: Don't worry about it.

Rogan: No? Not at all?

Musk: If I had a helmet of cell phones around my head and around my nuts, I would not worry.

Rogan: Yeah, I met a dude once who had ball cancer who was convinced that his cell phone was in his pocket, and that's what gave him ball cancer.

Musk: Nope.

Rogan: So there's no concern whatsoever with the radiation that's caused by those things?

Musk: Technically, we are currently bathed in radiation right now. Everything produces radiation. Everything's emitting photons all the time. It's just a question of what wavelength. If you have a very short wavelength or high -frequency photon, that is capable of causing DNA damage. But we're talking about, like, ultraviolet and beyond. Your phone's not even close."

Is he really that unaware of the tens of thousands of scientific studies and suffering people documenting radiation damage over the past decades? Laughing this off as totally bogus and denying any harmfulness whatsoever is the only position Elon can take to justify Starlink's fast deployment. Depriving humanity of information on the well-documented hazards as well as the possibility to have a radiation free resting place can only be understood as a concerted attack on humanity.

Elon Musk and the God of War

Elon Musk is heading Space X; a company with the mission to make humanity multi-planetary and start human civilization on Mars - the planet named after the Roman God of War. This mission is very unlikely, given the fact that since the 70's officially nobody has left Earth's orbit and there are so many evident instances of space fakery still sold to us as real today - but there is large element of hope that Elon is spreading. This stimulates one of humanity's fundamental instincts as James Corbett pointed out:

"I understand where a lot of his fanboys are coming from, why people are excited about him. Finally, here's someone on the public stage who has these big, grand ideas and is tapping into what I think is one of the most fundamental impulses of the human species, that inventor, explorer. We're going to go and find new frontiers. We're going to conquer them. We're going to find, we're going to develop new ideas and technologies. We're going to continue to expand and continue to develop. Yes, that is the human spirit in a nutshell. That is what has driven humans for countless generations to get to the point where we're at. And even further, if it weren't for the parasitic elite at the top who are trying to steward over us and control us with their brain chips and their transhuman nightmare and the agenda at play, which is exactly what Elon Musk is doing."

Sadly under the guise of progress and exploration a much more sinister and nasty reality shines through when we take a deeper look into the projects Space X including its subdivisions, Starlink and Starshield are really making their money with.

First off: Space X is does not exist because of Elon Musk's urge to explore Mars. It exists because powerful government-intelligence linked forces built it up and saved it from ruin multiple times.

While Elon Musk claims to be opposed to government subsidies, Space X always lived off massive government grants. Over the years 22 billion dollars in government contracts were awarded to the company. Musk got massive support by Mike Griffin to build up Space X.

Journalist Alan MacLeod writes: After his time working as president of CIA -funded In-Q-Tel, Griffin became the chief administrator of NASA. In 2018, President Trump appointed him as the Under Secretary of Defense for Research and Engineering. While at NASA,

Griffin brought Musk in for meetings and secured SpaceX's big break. In 2006, NASA awarded the company a \$396 million rocket development contract – a remarkable "gamble," in Griffin's words, especially as it had never launched a rocket. National

Geographic wrote that SpaceX "never would have gotten to where it is today without NASA." And Griffin was essential to this development. Still, by 2008, both SpaceX and Tesla Motors were in dire straits, with Musk unable to make payroll and assuming both businesses would go bankrupt. It was at that point that SpaceX was saved by an unexpected \$1.6 billion NASA contract for commercial cargo services.

Mike Griffin said in an Interview on January 12th, 2013: "the point is that there's less than \$200 million of private capital in SpaceX and \$1.2 billion of government capital."

By the way: Mike Griffin is now on the leadership team of „Castelion“ a weapons manufacturer with the mission to be at the cutting edge of a new global arms race. Four former Space X executives are on the leadership team as well.

But Space X is totally committed to peace and by no means part of the new global arms race, right?

Space X's Starlink satellites communicate with each other via a network of 8000 space lasers.

"They talked about this in the Star Wars program in the 80s. But, this is certainly something that can be done, which is you have just kinetic weapons from space or space based lasers. Starlink system technically does have lasers. But they're low power lasers - for now."

Wikipedia has this to say about the space weapons envisioned to be integrated into Musk's satellites: „The U.S. Congressional Research Service reports that future satellites in Starshield's participating SDA program may wield interceptor missiles, hypersonic projectiles, or directed energy weapons,[8] with the program's founder adding 'since Reagan's day, technology has advanced enough that putting both sensors and shooters in space is not only possible but relatively easy.'"

Starshield is the military industrial business unit of Space X that works on developing Space weapons, as we just heard and on what they call "Earth Observation".

Earth Observation means high resolution surveillance by the National Reconnaissance Office and others, for which Space X is launching a spy-satellite network. "This new imaging satellite constellation, built in partnership with SpaceX and Northrop Grumman, is designed to support military operations. The NRO, which designs and operates classified U.S. government surveillance and intelligence satellites, has characterized this rapidly expanding network as critical to modernize U.S. intelligence-gathering from space." "In its reporting, Reuters suggests that the high-quality imaging sensors on the SpaceX satellites in low-Earth orbit will exceed the resolution of some of the best US spy satellites at higher altitudes. They may also provide a superior alternative to the current use of drones and reconnaissance aircraft, which can be risky to fly in the airspace of other nations." "If successful, the sources said the program would significantly advance the ability of the U.S. government and military to quickly spot potential targets almost anywhere on the globe."

The German armed forces sealed a deal with Space X to transport spy satellites into orbit. They were launched in 2022 and 2023 and have the following capabilities: „As radar satellites actively emit electromagnetic pulses that are only slightly affected by atmospheric turbidity, they continue to provide reliable images even in darkness and through dense cloud cover.“

And more than just surveillance is being discussed openly.

"Musk: Space can also probably offer the ultimate weapons where you just have „Tungsten cannibals“ from orbit.

Interviewer: How about offensive weapons in space? Do you see those?

Musk: That's what I mean by rods from God."

Starlink satellites are directly involved in testing and use of the new weapons in the new global arms race as we can observe in Ukraine: Elon Musk says that Starlink is the Backbone to Ukraine's military communications.

"It is actually very important to have space-based communications that cannot be intercepted, which is what Starlink offers.

Starlink is the backbone of the Ukrainian military communication system because it can't be blocked by the Russians, essentially. It's the only thing that can't be."

He added that: „if it were to be turned off the entire front line would collapse“

Since 2022 Starlink has become the main internet and communications provider for Ukraine and its armed forces funded with US and polish taxpayers money. The Telegraph writes:

„The advanced satellite system keeps the army connected despite power outages and helps forces to target Russian tanks and positions“.

The Ukraine Starlink situation again reveals Musk's role as the salesman with a forked tongue. Musk came forward and called for peace, saying that he is tired of this senseless war. He even stopped the one or the other Starlink reliant drone attack personally. This effectively „pulled the wool over“ the eyes of freedom and peace-lovers, who now see Musk and his operations as somehow a force for peace. But of course Defense Secretary Marco Rubio and Musk are quick to assure that Starlink will remain fully operable in Ukraine.

Why not shut it off? Maybe because at the moment the Russia-Ukraine war is a all-out training ground to massively advance and train unmanned killing with integrated AI systems. An integral part of this is the real-time connection, transfer of data and descision-making which Starlink is facilitating. One platform reliant on Starlink is Ukraine's Delta System, co-developed by NATO that provides armed forces with a real time battlefield-overview map, video streaming from drones, encrypted chat and more.

Kateryna Stepanenko from the Institute for the Study of war describes what is going on this way: "Russia and Ukraine are engaged in an active technological race to develop and deploy drones with artificial intelligence (AI) and machine learning (ML) capabilities."

The Ukrainian side has been heavily supported by the Pentagon while Russia gets support from China. This real-war training program for AI is a wet dream for anybody interested in a fully capable mechanical control grid.

Elon Musk: „Well, in fact, the current war in Ukraine is very much a drone war already. It's sort of a contest between Russia and China to see who can deploy the most number of drones.

Now, if there's a major power war, it's very much going to be a drone war. It's going to be drones and AI.

And, you know, it's sort of – I mean, I do worry about the existential risk of AI,(...) which is that if you deploy AI and drones, do you go down this path where eventually you get to Terminator. You know: try to avoid that.

Brigadier General Shane Reeves:

That would be good. That would be good.

Elon Musk:

Minimize the Terminator risk. But, I mean essentially, when you're making military drones, you are making terminators.

And I think you'll somewhat be forced into giving the drone localized AI, because if the AI is far away, it can't control as well as localized AI.

Brigadier General Shane Reeves:

So what do you mean by localized AI?

Elon Musk:

Meaning it's an autonomous killing machine.

Brigadier General Shane Reeves:

Completely autonomous?

Elon Musk:

Well,(...) you give it the okay in a particular arena, and it goes.

Brigadier General Shane Reeves: With certain parameters?

Elon Musk: Yeah, hopefully.

Brigadier General Shane Reeves:

Do you think our adversaries will have those same type of concerns or limitations?

And here we have the typical incentive for pushing these developments further and further:

There could be a bad guy who has it. And we are the good guys who need to stop him. Oh, really?

Two war-faring Governments without ethical concerns and limitations are also receiving full Starlink support: Saudi Arabia and Israel. The latter gets the special rights from Musk to dominate Starlink use, meaning Internet access, in Palestine as well.

Elon Musk's SpaceX is also now partnering with pre-crime software developer Palantir and the autonomous weapons manufacturer Anduril („I love killer robots“) to support the Pentagon building the new AI powered Missile Defense System „Golden Dome“. The part they are bidding to do is to build and launch 400 - 1000 satellites to sense missiles and track their movement.

Musk is obviously of good service to Mars the God of War. Not only is he cloaking the establishment of a highly efficient control grid as an innovative connectivity grid, he also is captivating and directing the masses' urge to explore with the thrill of going to Mars.

Elon Musk and the Dark Side

This is Elon Musk's Mother Maye Musk who has been on the magazine covers as a model for 50 years presenting to the world occult symbolism like this 666 hand symbol and other creepy appearances.

Of all things, she participated with her „Vampire look“ in Beyoncé's music video „Haunted“. And she accompanied her son to Heidi Klum's infamous birthday party. It is hard to believe that Elon Musk had no idea what message he was sending on that occasion wearing a 6000 USD leather suit featuring Baphomet and the upside-down cross.

Elon also wore the suit, with the words: „Novus Ordo Seclorum“ ("New order of the ages") to the Met gala. A phrase he posted right after Trump was elected for his second term and which is found on the Great Seal of the Freemason-founded United States of America.

Next to Elon is Claire Elise Boucher known as singer „Grimes“ with whom Elon has three kids born between 2018 to 2023.

Here are some of the titles to her songs:

Kill V. Maim (2016)

Shinigami eyes („death god“ eyes) (2022)

Violence (2020)

My name is Dark (2019)

and „We appreciate Power“ (2018) featuring this lovely cover image and this text:

„We appreciate power, power

People like to say that we're insane

But AI will reward us when it reigns

Pledge allegiance to the world's most powerful computer

What will it take to make you capitulate?

We appreciate power“

Entertainment News site „Bang Showbiz“ wrote in October 2022:

„Grimes often features dark occult themes in her music videos and likes to post pictures of her mystic books. The genre of some of her music is Witch house. Grimes - the ex-partner of Elon Musk - carries out extreme practices while recording which involves barricading herself for three weeks in a room without food and company. She said: "Once you hit day nine, you start accessing some really crazy s***. "You have no stimulation, so your subconscious starts filling in the blanks. I started to feel like I was channelling spirits. I was convinced my music was a gift from God. It was like I knew exactly what to do next, as if my songs were already written.“

Here she is posing with the baphomet hand sign for a photo-shoot.

It does not appear far fetched that Elon Musk is entwined with dark satanic circles and bears their dark symbols of dominance.

Notably during the 2024 election campaign he came on stage to proclaim: „I’m dark gothic Maga“

Considering the amount of attention and unconditional support two ultra billionaires could draw from the masses despite having so many obvious ties to evil entities attached to them, and despite publicly promoting mRNA Covid jabs and enhancing the military control grid, again it does not seem far fetched to suspect that the true meaning of the term Maga is „Magician“.

It also is interesting that the „Maga“ officially is the fifth and highest degree in the Church of Satan.

Marina Abramovic: I was in Rome two days ago. And I met one shaman woman from the north of Norway. So this woman told me three days ago, that Trump is the best thing that happened ever to us. Because she believes, not just her, but the entire population of these Nordic magicians that he is the magician of the highest order. That he is there in his irrational mind to create confusion in order that the human beings can find new order. And you know its not so stupid, thinking about this in that way. He is completely turning things upside down. Because since Trump is around things are changing. Because we are waking up.

Elon Musk the Free Speech Hero

2020 and 2021 were very extreme and testing years for humanity. Already in the Spring of 2020 mainstream-media and social media were doing their utmost to delete, de-platform, censor and omit all voices „undermining the government narrative and orders“ on the foretold pandemic. No matter how high ranking an expert you were, there was no large platform that would allow dissent to reach the wider public. Free speech lovers fought hard to get the life-saving warnings to the public and to the officials that had to make decisions, especially when the experimental mRNA vaccines were marketed and mandated as the only solution.

Conveniently AFTER the experimental Covid mRNA shots were rolled out and widely administered multiple times to a large percentage of the world population Elon Musk acted upon his discovery that there was an existential threat to free speech. He bought Twitter for 44 Billion USD and assumed control over it in October of 2022. He claimed that his motivation was to transform it from a dangerous far-left information-weapon to a more open debate room. He fired the old executives and reinstated accounts, most prominently Donald Trump’s account. The former WEF young global leader suddenly found his voice and began criticizing the WEF and he even discouraged people from taking the Covid mRNA shots while also praising them on other occasions. But the general message that stuck was: Elon Musk is a free speech absolutist and will defend it with all his power as the world’s richest billionaire. He is standing up to the far-left ideologies and globalist agenda. He is part of the resistance. But is he really?

David Icke asks the simple question nobody has asked Elon yet:

„Why on earth would the Cult and Deep State that had full control over Twitter sell it to a „free

speech absolutist“ unless it suited them?“ Twitter actually sued Musk, who wanted to pull out of the deal, so that he would stick to the deal and buy Twitter.

Musk finally bought Twitter with substantial help from 100 Investors; including Larry Ellison, Marc Andreessen and accused Sex offender P. Diddy (Sean Combs) and with loans from large Banks including Morgan Stanley, Barclays and Bank of America. A whole bunch of free speech loving entities.

Soon Linda Yaccarino was appointed CEO of X. Yaccarino also Chairs the WEF's Taskforce on Future of Work as well as a committee on media, entertainment and culture.

Here is what Yaccarino has to say about free speech on X:

"We've introduced a new policy to your specific point about hate speech called freedom of speech, not reach. So if you're going to post something that's illegal or against the law, you're gone. Zero tolerance. But more importantly, if you're going to post something that is lawful, but it's awful, you get labeled. You get labeled, you get de -amplified, which means it cannot be shared."

Here is what Musk has to say about free speech on X:

"Twitter doesn't have a choice but to obey local governments. If we don't obey local government laws, then we will get shut down. So the best we can do is really to hew close to the law in any given country. But it is impossible for us to do more than that, or we will be blocked and our people will be arrested."

And indeed X does comply with the law. After a row with the Brazilian Government in 2024 which led to X being banned in Brazil, it went back online in October after X complied with all the deleting censorship that the Brazilian court required it to do.

AlJazeera reports that:

„Twitter has complied at least partially with 98.8 percent of take-down requests under Elon Musk's ownership, data shows.“ while Twitter before Musk complied only in about 50% of cases.

This is of significance as we are facing increasingly harsh censorship laws like the European Union's Digital Services Act. X is committed to enforcing them.

The question posed by David Icke though can be followed up by the question: Why does a ostensible „free speech“ platform suit the cult?

Whitney Webb makes a very good point.

"In my opinion, Elon Musk bought Twitter for user data much more than he bought it for free speech. And keep in mind that he's a Pentagon and well, he's a military and intelligence contractor, just like Palantir is. So let's back up for a second. So Palantir, Palantir, deeply tied to the CIA. It decides who goes on the domestic terror watch list or main core for the CIA based on your online activity. That's what Palantir does. [...]

But we know that Facebook and all these other companies have given our data to the government. Even new X policies have said that like your DMs can be given to the government if there are requests made and things like that. So I think Elon Musk plays both sides. I think he does good cop, bad cop between himself and his CEO, Linda Yaccarino.

You know, she'll come out and say something that's unpopular and Elon Musk will say something else. But ultimately, you know, Twitter's policy isn't really that different. And now the people doing identity verification for Twitter, because the goal for Twitter, Elon Musk said at the very beginning, is to verify all humans. So have you verify yourself by linking your government issued ID to your Twitter account? So no more anonymous Twitter accounts.

Right. And the problem with that is that, you know, they probably know who you are if you're anonymous. But if they don't like what you're saying and or, you know, they think you might commit a crime. Or something like that before you do it in this pre -crime paradigm that they've they've set up, if they link it to your government ID, that's troubling. And the company

now doing it, it used to be an Israeli intelligence connected firm. Now it's Stripe, which I believe is funded by Peter Thiel and some of these other PayPal guys."

x.AI now also signed a deal with Telegram, another free speech platform, to have Grok rolled out there too.

Social media has shifted to become a tool for AI empowerment. Also it is getting the user accustomed to AI interaction. X is now owned by x.AI. The AI is officially training off the user data. The same is true for Mark Zuckerberg's Facebook feeding Meta's AI.

It seems that the control cult has shifted gears: from censorship to feed its AI with the maximum amount of data and preferences including those of the "critical thinking" part of the population. Personal and personality data are valuable and an important basis for the system of preventive punishment. This ensures that the AI is optimally prepared to identify the resistance.

Elon Musk in Government

For years Elon Musk has been a big advocate for direct democracy, the governance he repeatedly suggested for Mars.

Well, just recently in the first months of 2025 Elon had the unique opportunity to be part of the US Government with unparalleled access to the US President, as Trump appointed him to lead a new Department of Government Efficiency (DOGE).

In all this time we did not observe any suggestions to Trump for direct democratic decision-making. As we noticed before, Musk and the Tech Bro's are bringing unprecedented change on all of humanity without anybody getting a vote on it. Many other Big-Tech executives besides Musk are given big political platforms and contracts to expand all this new tech. How about a direct democratic vote on whether the population wants to continue development of AGI and artificial super-intelligence?

Or how about a vote on whether the population wants all those spy satellites SpaceX is helping put up into space which are monitoring every inch of the earth?

How about an informed direct vote whether the population wants phased array 5G beams being shot at them from space in ever increasing density?

If Musk was such a believer in direct democracy he should have been on the barricades when Trump issued his unprecedented wave of Executive Orders.

No outcry by Elon when Trump dismantled certain Governmental oversight of new AI products on his third day in office with the executive order titled: „REMOVING BARRIERS TO AMERICAN LEADERSHIP IN ARTIFICIAL INTELLIGENCE“

Musk supported the executive orders.

"The president will make these executive orders, which are very sensible and good for the country, but then they don't get implemented, you know? [...] So what we're doing here is, one of the biggest functions of the Doge team is just making sure that the presidential executive orders are actually carried out."

Direct democracy is obviously only for Mars. And Elon, who showed no interest whatsoever in introducing this as a member of the US Government, will surely be the driving force to implement it on Mars? You can bet, NO? For it's more like this, isn't it?:

„Interviewer: Who is going to win the White House in 2024?

Elon Musk: Who do you think will win the White House in 2032 - Which type of AI?

Transformers or the Fusion?“

Elon's time working for Trump ended in a massive dispute between Musk and Trump on social media about Trump's „One Big Beautiful Bill Act“. The dispute was all about Government spending and that the proposed bill would cost the taxpayer way too much money and that the bill was so long.

Elon seemed to be going all out against the president, even rightly accusing him of being

affiliated with Jeffery Epstein. But he failed to mention key content of the bill. Which is massive: Defense spending will be raised by 150 billion to go beyond the 1 trillion mark for the first time in history.

Money is directly allocated to a variety of weaponry like:

directed energy capabilities, autonomous military capabilities and the nuclear forces. Large sums are also being invested in the development of autonomous AI-controlled weapon systems on land, at sea, and in the air.

At the time of the spat between Trump and Musk the draft of the bill also provided for the Secretary of Commerce to receive 500 million, in order to roll out AI, while the States are prohibited from „limiting, restricting or otherwise regulating Artificial Intelligence models and systems“ for 10 years. Musk did not comment on any of this.

The ban on regulating AI for the coming 10 years was vetoed by the Senate and removed from the bill. However the rest of the law was passed, and still provides for massive expansion of AI infrastructure. For example, more than 6 billion USD have been earmarked for new technologies including AI-based systems to be implemented for border surveillance. Why does Musk not speak openly about all this? Was the fight an concerted effort to once again distract as much attention as possible away from the content to the persons? By the way, Musk took down his Epstein tweets stating that he went to far. And the 900-page big beautiful bill was passed into law.

Despite the feud between Trump and Musk, Musk's x.AI Company announced in July 2025 that the Pentagon has awarded it a 200 million USD contract to begin using their new „Grok for Government“ AI services.

Musk headed DOGE the Department of Government Efficiency for the first 130 days of Trumps 2nd Term, though it said that the main person in charge was Steve Davis, former CEO of Musk's Boring Company and an executive within X.

DOGE promised 2 trillion in cuts of government spending and has delivered some 200 billion to date as they proclaim on their website.

They have also identified and slashed bureaucracy that is unnecessary in their view.

Besides that they have joined forces with Palantir to create a unified Palantir database of taxpayer data. AlInvest writes:

„Palantir's collaboration with Elon Musk-backed DOGE on a \$1.5 billion IRS data integration project is central to its federal ambitions. The initiative aims to unify scattered IRS databases into a single API layer, leveraging Palantir's Foundry software to streamline taxpayer data access and analysis.“

It seems that DOGE, which according to the New York Times has three former Palantir employees in it's team, has brought in Palantir to create a Master-database including all information from all government entities on all U.S. citizens. This is implementing Donald Trump's Executive Order which orders the „consolidation of unclassified agency records.“

Wikileaks writes: „Palantir is building a sweeping AI-driven database of U.S. citizens, integrating government-held data on everything from political activity to firearms ownership. Even within the Trump-aligned America First movement, this direction is raising alarm.“

Palantir is the company that, under the pretext of the fight against terrorism", is selling pre-crime software to Governments around the world and is selling AI-Software to Isreals Government, enabling it to determine targets for their attacks. And DOGE brought these guys in to compile US citizen's data! All for more efficiency - how nice.

Also a nice move by DOGE was to have the Trump Administration fire 5 Inspector Generals inspecting Elon Musk's businesses.

All of this, in a sense, is reminiscent of the Technocracy movement to whom Elon Musk's Grandfather Haldeman belonged, who believe in replacing politicians with scientists,

engineers and technical experts to run the economy.

And here we are today with an unelected tech elite including the pre-cime company Palantir and some the biggest AI providers on the face of the earth getting unparalleled access to government data and rolling out AI in administration to take over more and more topics including defense. We have reached the point where AI tech executives from Meta, Palantir and Open AI, were openly awarded the rank of Lieutenant Colonel, as of June 2025, to serve part time in the US-Army. What could possibly go wrong?

„Interviewer: Who is going to win the White House in 2024?

Elon Musk: Who do you think will win the White House in 2032 - Which type of AI?

Transformers or the Fusion?“

Epilogue

Quite a big portion of the population has been harmed by the Covid mRNA jabs and the government's medical tyranny. They have entered resistance mode.

In posts and statements Musk is siding up with them. But is he the resistance or just a cleverly positioned distraction? This documentary has shown that the agenda of enslavement is moving faster than ever.

An omnipresent control grid, an all-knowing, all-powerful AI God is very actively being built by the brands Elon Musk represents and many others.

Sadly we can't rely on Elon Musk to stop this. He has already surrendered to it. But what about us, what can we do?

If we understand the situation we can make a choice. As Kla.TV Founder Ivo Sasek fittingly put it: We are in a similar test to Adam and Eve were in the Garden: Will we unite with the AI fruit offered to us by the dark side and surrender to it as Musk has, which will inevitably lead us straight into slavery and dystopia as has never been seen before - or we can refuse to be blinded by the seeming benefits of joining AI and choose to bring true life to a next level and unlock the wonderful potential in us and our fellow humans.

It is also of critical importance to recognize that this AI machine only feeds off of it's creators input. It can only draw conclusions on the base of our existing level of knowledge and data. So whatever flaws and errors are prevalent in our human ideologies, reasoning and conduct, will be prevalent in the AI that is trained with that data. AI simply reinforces what its makers want it to reinforce.

What this new digital god totally fails to take into account is our ability to renew our minds and change our behavior, and through faith, supernaturally change our circumstances and reality. Your AI prescription based on your behavioral patterns and lifestyle becomes meaningless, once you realize that unprecedented capabilities and intelligence slumber in each and every one of us and are waiting to be accessed. No digital interface needed; quite the contrary. Letting go of old securities, becoming weak and small in one's own ability and knowledge is the key to unlocking these treasures of untapped potential within us and within the network of truth-loving people.

"Together we form the divine organism. We accumulate our divine abilities. You are not alone. Every cell in the human organism is designed and intended to produce and develop the necessary divine antidotes within itself in times of need. [...] Together we have a thousand times more abilities, powers, virtues and possibilities than the worst devils working against us could ever have. And if we use the coming AI [...] solely to let the AI trappers fall into their own trap, we will be head and shoulders above them."

Security advice:

Unfortunately countervoices are being censored and suppressed more and more. As long as we don't report according to the ideology and interests of the corporate media, we are constantly at risk, that pretexts will be found to shut down or harm Kla.TV.

So join an internet-independent network today! Click here:
